Optometry & Contact Lenses

Media Kit 2023

**The scientific journal for optometry and ophthalmology**

# Optometry and Contact Lenses (OCL)

Dear Ladies and Gentlemen,

The importance of optometry is growing inexorably both nationally and internationally. The journal "Optometry & Contact Lenses (OCL)", which is now more than a year old, has more than lived up to this fact since its first issue in July 2021. In the previous issues of OCL, clinicians and scientists from Germany, the Czech Republic, Namibia, Slovenia, Switzerland, Great Britain and the USA have published more than 45 specialist articles from the fields of optometry and ophthalmology. The combination of a German-language print edition and a German- and English-language website makes Optometry & Contact Lenses, published by DOZ Verlag, an interesting and important scientific medium, especially for readers and authors, but also for the industry.

The aim of the journal can be summarised in five points as follows:

**Readership:** opticians, optometrists, ophthalmologists and doctors in further training to become ophthalmology specialists from Germany, Austria and Switzerland as well as students of these disciplines.

**Objective:** OCL is dedicated to the overall complex of eyes and vision (Eye and Vision Care). OCL publishes scientific and clinical articles and case reports from the fields of ophthalmic optics, optometry, ophthalmology and related disciplines. In addition, it publishes interviews with well-known personalities of the disciplines, book reviews on current new publications from the field of Eye and Vision Care.

**Relationship:** The professional journal is the official organ of the Association of German Contact Lens Specialists and Optometrists (VDCO). Each issue contains VDCO association information accordingly.

**Continuing Education:** Each issue also includes a section on "Continuing Optometric Education (COE)-certified continuing education". For successful completion of a COE-certified course in Optometry and Contact Lenses (OCL), the participant receives 1 COE continuing education point. The OCL Editorial Board selects the respective article; the questions are designed as multiple-choice tests according to the guidelines of the German Optometric Services Association (GOL). They can be answered online at the OCL website (see below).

**Website:** The website [www.ocl-online.de](http://www.ocl-online.de) and [www.ocl-online.com](http://www.ocl-online.com) contains all articles published in OCL Journal and are freely available to subscribers there. Individual sales of articles for non-subscribers are also guaranteed. The website is bilingual (German and English) to reach the international audience.

The DOZ publishing house and I are sure that OCL is a scientific journal, which gives the entire German-speaking ophthalmic optics an important and necessary impulse.
